BARR'S "PURE" GRASS SEEDS

Produce Beautiful Lawns, Tennis and Cricket Grounds, Public Parks, etc.

Renovate Lawns, etc., in September, after the wear and tear of Summer. For renovating, 20 to 30 lbs. of Grass Seed are required per acre.

The following mixtures of Grass Seeds are all thoroughly cleaned, and cannot fail to give the greatest satisfaction. There are neither Clover nor coarse grasses in the mixtures.

To ensure a fine lawn, free from weeds and coarse grasses, it is most important that the soil to be sown should be quite clean, that is, free from the seeds of objectionable plants, and the grass seeds used should consist solely of the fine-leaved dwarf-growing grasses.

In sowing grass seeds always take advantage of rainy or damp weather, and after sowing, give a slight covering of clean finely-riddled soil; this, followed by rolling, when the soil is sufficiently dry, will ensure a successful vegetation. After this, frequent cutting and constant rolling will be necessary to have a fine smooth lawn.

No. 1. **Thames Embankment Lawn Grasses**, this special mixture has been very successful on the Thames Embankment, and in the formation and renovation of many public and private parks and squares around London and throughout the country. Per lb., 1/4; per 10 lbs., 12/9; per 20 lbs., 24/-; per 56 lbs. and upwards, at the rate of 1/2 per lb.

No. 2. **Fine Lawn Grass Mixture for Improving Old Lawns or Laying Down New Ones, Croquet Grounds, and Bowling Greens**, in this mixture there is a larger quantity of small grasses than in No. 1, per lb., 1/5; per 10 lbs., 13/6; per 20 lbs., 26/-; per 56 lbs. and upwards, 1 3 per lb.

No. 3. **Extra Fine Lawn Grass Mixture for Improving Old Lawns or Laying Down New Ones, Croquet Grounds, etc.** this is a specially fine mixture of dwarf growing grasses only, which make a finer, closer, and smoother turf, and does not require to be so often mowed as Nos. 1 and 2; it is specially adapted for select lawns. 1/9 per lb.; per 10 lbs., 16/6; per 20 lbs., 31/-; per 56 lbs. and upwards, 1/6 per lb.

No. 4. **Barr's New Mixture of Dwarf Growing Grasses**, specially recommended, when an extra fine, smooth lawn is required; the grasses are of the finest leaved kinds, and dwarfest growers, so that in using this seed a great saving is effected in mowing, besides having a perfect lawn. Per lb., 2/-; per 10 lbs., 19/-; per 20 lbs., 37/-; per 56 lbs. and upwards, 1/10 per lb.

Dutch Clover, Finest White, if Clover is desired, it may be added to the Grass Seeds, at the rate of 3 to 5 lbs. per acre. Per lb. 1/6.

HOW TO DESTROY WEEDS ON LAWNS.

WATSON'S WEED-DESTROYING LAWN-SAND will kill Daisies, Dandelions, Plantains, etc., on Lawns, Croquet Grounds, etc., and is also a good fertilizer for the grass. Fuller particulars will be sent on application. Price for sample canister, 2/6 and 5/6; per 1 cwt. 9/6; 1 cwt., 18/-; 1 cwt., 34/-.

BARR & SON, 12 & 13 KING STREET, COVENT GARDEN, LONDON.

ENTERED AT STATIONERS' HALL.]

SPECIAL NOTICES.

- I. **Quality.**—We annually make a professional visit to the principal "bulb farms" of Holland, to inspect the crops, and arrange for our supply of Dutch-grown bulbs from healthy "stocks" and from the most reliable growers; we can therefore recommend those offered with the utmost confidence, feeling sure that if the bulbs receive proper cultural treatment they will give greatest satisfaction. *Simple and short practical cultural directions head each family of bulbs, etc., in the following pages.*
- II. **Daffodil and Experimental Grounds** are close to the Surbiton New Recreation Grounds, and may be reached on foot in a few minutes from Surbiton Station, S.W.R., or by cab, the fare being One Shilling to the *Pound Farm entrance of the Nurseries*. Visitors will at all seasons find many things of interest and beauty in **Hardy Bulbs, Tubers and Herbaceous Perennial Plants**. In spring our new English Daffodils make a brilliant display, and a fine contrast in colour is produced by great sheets of Chionodoxas, Anemones, Muscari, Early-flowering Tulips, etc., surpassing description. From August to April one variety or another of our unique collection of rare Species of *Crocus* may be seen in flower, and in September and October there is a gay display of beautiful varieties of Meadow Saffrons.
- III. **Parcel Post.**—We shall in all cases use the **Parcel Post**, when cheapest, and the articles ordered weigh under 11 lb., and admit of being packed for safe transmission by "*Parcel Post*"
- IV. **Carriage by Rail** may be deducted at settlement of account, on orders for Bulbs to any Railway Station in Great Britain, and to all ports on the Irish Coast (except goods coming under Clause VII.).
- V. **Orders, paid in advance.**—Carriage in all such cases will be prepaid, and this notified on invoice.
- VI. **Returned Empties.**—A small charge is made for packages, but if returned within a fortnight, allowance is made for the same. *Returned empties should have the sender's name on the address label for identification, and a notification should be sent by post stating date of dispatch and name of Railway Company.*
- VII. **Fruit and Forest Trees, Shrubs, Plants in pots, Soils, Watson's Lawn Sand, Manures, Anti-Blight, and Insecticides**—on these we do not allow carriage.
- VIII. **Five per cent.** may be deducted from accounts if paid within one month from date of invoice.
- IX. **Money Orders and Postal Orders** to be made payable at Covent Garden Post Office; these and all cheques should be crossed, "*London and County Bank.*" Small amounts may be remitted in Postage Stamps or Coin, in a *Registered Letter*.
- X. **Daffodil Catalogue.**—The annually increasing importance attached to Daffodils for forcing, and as cut flowers, also for out-door decoration in beds, borders, and to naturalize in grass, has necessitated the issue of a special "*Daffodil Catalogue*," and to this we have added a descriptive list of our grand collection of "*English Amateur*" Tulips, and our exceptionally fine collection of Double and Single Paeonies, which we recommend with the greatest confidence as the finest in Europe. Barr's "*English Amateur*" Tulips were awarded, May 25th, 1893, at the Temple Show, the R.H.S. Silver Cup, and Silver Gilt Flora Medal, May 8th, 1894.
- XI. ~~and~~ **Naming Daffodils.**—Cut specimens of Daffodils we undertake to name correctly at the charge of 6d. each, 2s. 6d. per dozen, 15s. per 100, to cover attendant expenses. Address all cut specimens for naming, accompanied by a remittance, to our *Nurseries, Ditton Hill, Surrey*.
- XII. **Cut Daffodil Flowers.**—When in bloom out-of-doors, cut specimens of our English Daffodils, correctly named, we forward post-paid at a minimum charge to cover attendant expenses, thus offering a good opportunity to those who wish to extend their knowledge of these lovely flowers of spring. *Fees will be found under Special Notices in Daffodil Catalogue, 1895.*
- XIII. **Medals, Certificates, &c.**—The Royal Horticultural Society, for many years past, have annually awarded to us, for our Exhibitions of Beautiful New Daffodils, &c., Gold Medals, Silver Medals, Silver Cups, &c., with numerous Votes of Thanks, and many First Class Certificates. At the Second Great Daffodil Conference of the R.H.S., held from 15th to 18th April, 1890, our Grand Display of New English Daffodils was awarded the ONLY GOLD MEDAL. Many Medals, Prizes and Certificates have also been awarded to our Beautiful Hardy Daffodils, &c., at the ROYAL BOTANIC GARDENS, CRYSTAL PALACE, ROYAL AQUARIUM, EARL'S COURT EXHIBITIONS, &c., at whose large London Spring Shows Barr's Daffodils are always a great attraction. The awards received for 1894 have been SIXTEEN MEDALS and FIVE CERTIFICATES, and the present year we have also received a great many awards.

At the Birmingham Daffodil Show, held April the 18th, 1894, we were Awarded a Silver-Gilt Medal (Highest Award) for our Exhibit, and the Premier Prize for the Finest New Daffodil.

Barr's Daffodil Silver Cups will be the great prizes of Spring, 1896, see Daffodil Catalogue.

Barr's Daffodil Prize Medals will be Awarded, Spring, 1896, see Daffodil Catalogue.

Barr's "English Amateur" Tulip Prize Medals will be Awarded, 1896, see Daffodil Catalogue.

NOTICES TO OUR FOREIGN AND COLONIAL CORRESPONDENTS.

- XIV. To insure prompt attention, *orders should be accompanied by a remittance, a draft, or an "order to pay," on a London agent; the remittance being sufficient to cover expense of cases, and also of carriage when the freight is required to be paid in advance.*
- XV. **SEEDS AND BULBS** can now be despatched to India at the rate of 8d. per lb., through the Indian *Parcel Post*, or by "*Express*" to the nearest port or railway station at a lower rate.
- XVI. In shipping **Bulbs and Plants** to India and the Colonies, great care is exercised by us in selecting, preparing, and properly packing the same. Still, there are so many contingencies, that we cannot, in any way, hold ourselves responsible for the condition in which plants or bulbs reach their destination.
- XVII. Our experience in successfully preparing and shipping **Seeds, Bulbs, and Plants** to India and the Colonies, extends over a long period.

A FEW NOVELTIES AND SPECIALTIES.

199	<i>Aibucia Nicisoni</i> , a beautiful Cape bulb for south borders, bearing in June handsome spikes of almond-scented flowers, <i>pure white</i> , with brown stripe, when grown under glass pure white ...doz 10/-; each	s. d.
200	<i>Ansmone</i> , New Double, "White Lady," beautiful large double white flowersper doz.	1 0
201	" New Double, "Blush Beauty," white, flaked and shaded delicate rose-pink, a very lovely colourper 100, 7s. 6d.; per doz.	3 6

BEDDING, POMPON, ROMAN HYACINTHS, ETC.

~~45~~ The Marginal Numbers in the Order Sheet and Catalogue correspond, and are changed annually.

BARR'S BEAUTIFUL BEDDING HYACINTHS.

SPECIALLY SELECTED FOR OUT-DOOR CULTURE IN BEDS, RIBBONS, OR GROUPS.

When in Holland we selected these extra fine varieties of Hyacinths as being the most suitable for beds and groups of distinct colours or for ribbons and designs. Each variety is *distinct, of a fine habit, with bright colour and large flower spike.* They are also the best for filling rustic baskets, flower boxes, vases, etc.

BARR'S BEAUTIFUL "RAINBOW" MIXTURES OF HYACINTHS.

FOR FILLING BEDS AND PLANTING IN BORDERS, Etc.

332 "BARR'S BEAUTIFUL 'RAINBOW' MIXTURE OF HYACINTHS,"	this beautiful mixture of
	Hyacinths was specially arranged for by our Mr. Barr on the occasion of his visit to one of the large Dutch Bulb Farms in Holland. The colours are evenly blended, including red, scarlet, purple, lavender, porcelain, azure-blue, white, rose, blush, yellow, &c., producing a magnificent effect in flower beds and borders

POMPON, OR MINIATURE HYACINTHS for Children's Gardens, etc.

In children's gardens and small flower beds, these Miniature Hyacinths, alone or intermingled with other dwarf spring-flowering bulbs, make a fine display throughout the Spring months.

They are also valuable for growing in small glasses, fancy pots, old china bowls, crystal dishes, jardinières, etc., alone or associated with Scilla sibirica, Chionodoxas, Crocus, Snowdrops, Dwarf Tulips, and Daffodils, Iris reticulata, etc. Plant in "Barr's Prepared Mixture of Charcoal and Cocoa Fibre," or in Jadoo Fibre (see separate "Sundries" List), the surface may be covered with fresh green carpet-moss till the plants appear.

ROMAN HYACINTHS AND NARCISSI for Early Forcing.

CULTURE.—Pot the bulbs 3 to 6, or more according to size, in a 4 or 5 inch pot, during August, September, and October; then place the pots out-of-doors on a bed of ashes, and with cocoa-nut fibre or ashes cover the pots a few inches. There let them remain till the bulbs are well rooted, and have made a little top growth; the pots should then be removed, a few at a time, to a moderately warm and moist temperature, and plentifully supplied with water at the roots. A successional supply of these neat beautiful flowers can be maintained from October to January.

338 Roman Hyacinth, Early Dwarf White Sweet-Scented,	universally prized in bouquets, from Oct to Jan.
	Extra large bulbs, 16s. per 100; 2s. 6d. per doz. Fine selected bulbs, 13s. 6d. per 100; 2s. per doz.

339 Roman Hyacinth, Early Blush {	These flower a little later than
340 Roman Hyacinth, Early Rose {	No. 338, and with larger spikes, very sweet-scented.

341 Roman Hyacinth, Early Blue, flowers from a fortnight to three weeks later than the White Roman Hyacinth,	10s. 6d. per 100; 1s. 9d. per doz.
--	------------------------------------

342 Straw-coloured Early Hyacinth, flowers beautiful pale yellow,	a little later than the White Roman Hyacinth, 21/- per 100; 3/- per doz.
---	--

343 Narcissus, "Early Snowflake" Paper White, Sweet-Scented,	fine large free-flowering variety of Paper White Narcissus, in bloom with the Roman Hyacinth, if treated in the same way, 10s. 6d. per 100; 1/- per doz.
--	--

344 Roman Narcissus, Early Double,	in flower with the Paper White Narcissus, if treated in same way, blossoms double white, with orange centre. The individual flowers mounted on wire are much used for bouquets and buttonholes, 5/6 per 100; 1/- per doz.

BARR'S CHOICE NAMED HYACINTHS.

FOR CULTURE IN GLASSES, JARDINETS, POTS, AND FOR EXHIBITION.

The * indicates the Hyacinths with large flower spikes and single or semi-double blossoms, which we specially recommend for early forcing in pots, and for growing in glasses, jardinets, &c.; also for exhibition.

The † denotes the varieties with double blossoms. Those enumerated are a selection of the finest double-blossomed varieties in cultivation, and we recommend them for pot culture, but not for growing in glasses, jardinets, or for forcing.

CULTURE.—Immediately the Hyacinth is potted, which may be done from September to December, place the pots out of doors on a bed of ashes, and cover with six inches of the same material, but a covering of coco fibre is preferable if it can be had; the bulbs should there remain exposed to all weathers until the pots are full of roots, and the tops have sprouted about an inch, which will be in about eight or ten weeks after potting. They may then be removed indoors, and if forced, this should be done gently in a moist airy atmosphere, and the bulbs plentifully supplied with water at the roots. To maintain a succession, arrangements should be made before covering for a portion to be removed indoors once a fortnight. If finely developed trusses and rich colours are preferred to very early flowers, the Hyacinth should remain longer out-of-doors and not be forced, but when removed indoors, the pots should be placed in a mild temperature, such as that of a greenhouse, a sitting-room window, or a frame, keeping the plants close to the glass, and always in the most genial and sunniest situation, so that the plants develop their flowers gradually and naturally, water being given regularly and freely, as it is well known to professional cultivators that failures, for the most part, with Hyacinths arise from allowing the soil to become dry. Abundance of air is necessary, as also a moderately moist atmosphere; a dry or frosty atmosphere or a draughty situation will cause the flower buds to shrivel.

If the Hyacinth is grown in glasses, the base of the bulb should just touch the water, and a little charcoal placed in the glass to keep the water sweet. It is, however, preferable to fill the glasses with the prepared Mixture of Charcoal and Cocoa Fibre or Jadoo Fibre (see page 33 for directions). Place the glasses in a room without a fire, or better still, in the shady part of a greenhouse, and when the plants have filled the glasses with roots, and have made a little top growth, then place them in the sunniest situation at command, till the flower spikes are well developed; the glasses may then be removed to where the flowers are to be enjoyed. Avoid a dry or frosty atmosphere and a draughty situation, as these are often the causes of the flower buds shrivelling.

When cultivated in jardinets, the Hyacinth may be associated with other early-flowering bulbs, such as Chionodoxas, Scilla sibirica, Tulips, Snowdrops, Crocuses, Narcissi, Iris reticulata, &c. Barr & Son's prepared Mixture of "Charcoal and Cocoa Fibre" or Jadoo Fibre should invariably be used (see page 33 for directions); the preparation must always be kept moist, and when the jardinets is removed to the sitting-room the surface should be covered with fresh green carpet moss.

The varieties of Hyacinths described, and included in the selections offered, are those which we have personally selected during our many visits of inspection to the bulb farms of Holland, and which, from experience, have proved the most worthy of cultivation. Bulbs all of extra fine quality.

(Barr and Son, 12 and 13 King Street, Covent Garden, 1895.)

22 BARR'S DAFFODIL PRIZE SILVER CUPS and MEDALS offered for cut Daffodil flowers, Spring 1896, particulars given under Special Notices in Daffodil Catalogue. Prizes will also be given in 1897.

BARR'S BEAUTIFUL HARDY DAFFODILS (Narcissi).

Bulbs Supplied September to end of December.

In our DAFFODIL CATALOGUE a descriptive list of the best Daffodils will be found.

The Daffodil is the most beautiful of all hardy Spring flowers, and the most popular; it has for centuries adorned our gardens, and withstood uninjured our severest winters.

For filling beds and planting in groups in mixed borders and shrubberies, no flowers of spring can compare with the Daffodil, and when naturalized in woodland walks, or forming large groups in grass, or planted on sloping banks, the effect Daffodils produce is splendid. (See page 3 of Daffodil Catalogue for Mr. William Robinson's experience.)

For greenhouse decoration the Daffodil ranks with the Hyacinth, and when 3 to 6 bulbs are grown in a pot, the effect is very fine. As a cut flower the Daffodil is unsurpassed, and greatly in demand, for hand bouquets, table bouquets, vases, etc.

22 Supplying Cut Specimen Flowers of Daffodils, correctly named, see Special Notices, in Daffodil Catalogue.

SELECTIONS OF

BARR'S HIGH-CLASS AND DISTINCT HARDY DAFFODILS,

For select Flower Borders and Pot-culture.

505 3 each of 100 varieties ...120/-, 150/-, 200/-, & 250/-.	510 1 each of 25 varieties7/6, 10/6, 16/-, & 23/-.

525 POET'S DAFFODILS, or STAR NARCISSI, IN MIXTURE, including early and late-flowering POETICUS, and varieties of BURBIDGEI for naturalization in grass, etc. (See what Mr. William Robinson says of the beauty of these Poet's Narcissi, when naturalized, page 3 of Daffodil Catalogue.) The cut flowers are much prized for their graceful beauty per 1000, 42/-; per 100, 5/6; per doz. 10d.

22 For a list of cheap named Daffodils to naturalize in plantations, see Daffodil Catalogue.

POLYANTHUS, OR BUNCH-FLOWERED NARCISSI.

The Polyanthus Narcissi have sweet-scented flowers, and are specially adapted for winter and spring decoration in pots and jardinières. The effect is greatly enhanced when three bulbs are grown together in a 6 or 7-inch pot. The culture is the same as that of the Hyacinth. For flower beds and mixed borders, the Polyanthus Narcissi are great favourites, and produce a beautiful effect, planted in October or November.

Where flowers are in demand in November, December, and early in January, the Paper White "Early Snowflake" and Double Roman Narcissi are of great value, and when forced as required, these and the Roman Hyacinths (see culture, page 6) can be had in bloom from October.

(Barr and Son, 12 and 13 King Street, Covent Garden, 1895.)

THE SACRED, OR GOOD LUCK LILY OF CHINA AND JAPAN.

Called by the Chinese, "Jos Flower," or "Flower of the Gods," and "Water Fairy Flower."

This is a species of *Polyanthus Narcissus* annually imported from Northern China, and prized for the abundance of its flowers and marvellously rapid growth. The flowers are white, with yellow cup, and very fragrant. Each bulb usually produces several flower spikes, each bearing many flowers, and the Chinese call the best cultivated and largest developed blooms, "Grand Emperor." In China and Japan the bulbs are grown in the living rooms in fancy bowls filled simply with pebbles and water, and the natives compete with one another in growing the finest specimens for their New Year's Festival, successful culture being regarded as an emblem of "Good Luck." The bulb in this country can be grown as successfully as in China, and it is most interesting to watch its rapid growth, which is somewhere about 20 inches in forty days; grow in a sunny window by day, and on a table near the fireplace by night, as frost destroys the flower buds. The natural atmosphere of a warm greenhouse suits this flower well. *Fuller particulars of culture sent with the bulbs.* Orders now booked for immediate delivery on arrival, which is usually about the end of September.

560 Very Large Bulbs, expected to arrive end of September.....per doz. 7/6; each s. d.

(one quart required for 3 bulbs).

SWEET-SCENTED JONQUILS.

The Double and Single Jonquils are prized for their graceful sweet-scented flowers in or out of doors. For in-door decoration three to six bulbs should be grown in a 4 or 5-inch pot, and cultivated the same as the Hyacinth in all respects, whether for early flowering or succession. If planted out-doors and treated the same as hardy Daffodils, a long succession of these sweet-scented flowers for room decoration may be maintained.

THE TULIP.

Our Single and Double Tulips were awarded First Prize International Hort. Exhibition, London, 1892.

The Tulip is extremely hardy, and of easy culture, flowering as freely in the shade as in the sunshine, and producing as fine flowers in a confined town garden as in more favoured places. Double and single Tulips, when mixed together and planted in front of shrubs, maintain a longer display than if either are planted separately. In gardens where the flower beds must be kept gay from the earliest dawn of Spring, plant between the lines of Tulips, Scilla sibirica, Chionodoxas, Snowdrops, or Crocuses; these flower first, and when out of bloom the leaves form a charming green groundwork for the blossoms of the Tulip.

EARLY SINGLE TULIPS, Bulbs of Finest Quality only.

Those alone who have massed the different varieties of Single Tulips (planting the bulbs 4 inches apart) can form an idea of their great beauty and the rich diversity there is in shade and colour, and the grand effect they produce grouped in flower beds or borders. The Single Tulip is extensively grown for indoor decoration (three or five bulbs in a pot), and cultivated in the same way as the Hyacinth for early-flowering and succession.

All the varieties of the early Duc Van Thol Tulip, Nos. 588 to 594, flower together, and are of the same height, which renders them valuable for beds and borders, where an early Spring display is required, also for early forcing with the Roman Hyacinth, etc.

DOUBLE TULIPS, Bulbs of Finest Quality Only.

Double Tulips have massive flowers of brilliant and beautifully diversified colours, and are very effective in beds on lawns, terraces, etc., also as edgings to Rose beds and shrubberies. Planted in groups of three or more in flower and shrubbery borders, they are very attractive.

For sectional lines, where the Early Single Tulip is planted in designs, the Tournesol, No. 654, being also early, is most valuable; it is excellent to force for early-flowering, and is grown extensively for Covent Garden Market. Imperator Rubrorum the best scarlet, Tournesol Yellow the best yellow for indoor decoration. These Double Tulips should be planted three bulbs in a pot, and receive the same cultural treatment as the Hyacinth. In beds or large masses, Rex Rubrorum, scarlet, associated with La Candeur, white, produces an unrivalled effect in the Spring flower garden. Plant the bulbs six inches apart.

PARROT, or DRAGON TULIPS, with Laciniated Petals (*May-flowering*).

EXTRA STRONG SELECTED BULBS.

These have large, characteristic blossoms with curiously laciniated petals, and richly varied shades of beautiful colours in the same flower. They are very remarkable and exceedingly showy and effective in flower borders, while if grown in hanging baskets the drooping flowers look like orchids.

The following are all selected extra strong bulbs, superior to what are usually sold, and may reasonably be expected to bloom, but as there is an unaccountable uncertainty in the flowering of these Parrot Tulips, they should not be used for filling beds, but for flower borders they are most charming. They may also be naturalized.

Barr's Beautiful "ENGLISH AMATEUR" Tulips.—May-flowering.

Awarded at the Temple Show, the R. H. S. Silver Cup, 1893, and the R. H. S. Silver-gilt Flora Medal, 1894.

Our Collection of "English Amateur" Tulips numbers above 450 varieties, of these 20,000 to 30,000 bulbs will be planted this autumn, and the flowers may be seen by visitors during May, 1895, at our Nurseries, Long Ditton, close to the Surbiton new Recreation Grounds, a few minutes' walk from Surbiton Station.

CROCUSES.

The Crocus is one of the earliest flowers of Spring, and occupies a deservedly prominent place in every garden. Planted as an edging in triple lines of one or more colours, the effect is striking. No Spring display surpasses that of broad wavy bands of golden-yellow, striped, purple, or of pure white Crocuses, when they expand their blossoms in February and March. In lawns and pleasure parks, planted in the grass, the Crocuses are extremely effective. For several years past in "Rotten Row," and other of the Royal Parks, Crocuses, Snowdrops, Daffodils, &c., have been planted in the grass, to the great delight of visitors, and the enhanced decoration of the parks. In wild gardens, woodland walks, etc., the Crocus should be associated with the violet, the primrose, and the oxlip.

CHEAP DUTCH CROCUSES, for Large Plantings.

To encourage extensive planting in shrubberies, woodlands, wild gardens, in grass, on lawns, pleasure parks, etc., Crocuses are quoted cheaply by the thousand. For a gorgeous effect in early spring nothing can equal the Golden Yellow Crocus, large masses of which attract the eye at a great distance.

CHOICE NAMED LARGE-FLOWERED DUTCH CROCUSES. Large Roots.

The following large-flowered named Crocuses are recommended for planting in groups, edgings, select beds, and in designs. There are purples and blues of shades, pure whites, rich yellow, light and dark striped sorts, &c. When the Crocus is grown in pots, plant thickly, and treat as recommended for the cultivation of the Hyacinth, on page 7. When removed from under the ashes, place in an airy situation, and give water very freely at the roots. A charming effect is obtained by growing Crocuses in shallow saucers of water (the bulbs touching one another), and this may be accomplished in an ordinary sitting-room.

AUTUMN, WINTER, AND SPRING-FLOWERING SPECIES OF CROCUSES.

Our collection of these Crocuses consists mostly of wild species, many of which were collected by George Maw, Esq., in Greece, Syria, Palestine, etc.; they cannot fail to be acceptable for rockwork and other select places, where they may be seen to advantage.

SNOWDROP (*Galanthus Nivalis*, etc.).

In the early Spring months, there is nothing more beautiful than a sheet of the snowy graceful blossoms of the Snowdrop. In planting an edging, mass, or a bed, whether in the turf of the lawn or in the flower garden, the bulbs should almost touch each other. A bed of surpassing beauty may be arranged, Snowdrops in the centre, with a deep fringe of bright blue *Scillas sibirica*, *bifolia*, *Chionodoxa Luciliae*, *C. sardensis*, or *C. gigantea*; a charming effect is also produced by intermingling in the proportions of two-thirds Snowdrops to one-third *Scilla* or *Chionodoxa*. When practicable such plantings of the Snowdrop should be permanent, and the surface of the soil in Summer top dressed and sown with annuals, such as *Nemophila*, *Leptosiphon*, etc., or planted with surface rooting bedding plants. The Snowdrop and the Crocus when planted in alternate circles are very effective, and follow each other so closely that no gap is left in the succession.

In beds of *Tulips* and *Hyacinths*, Snowdrops are very effective between the lines; they flower while these bulbs are just moving the surface, and when the flowers are over there remains an elegant groundwork of green foliage, or if the foliage is not desired, it can be cut down close to the soil.

The Snowdrop is most generally used for permanent edgings and masses, though in the fringes of lawns, where the grass need not be cut till May, and in pleasure parks, nestling in the grass, it looks charmingly at home. When planting in grass, the turf need not be disturbed, but holes about three inches apart and five inches deep should be made with a dibber, dropping in three inches of fresh soil, then three or more bulbs. Snowdrops planted on banks and grass slopes look lovely. The Giant Single Snowdrop, *Galanthus Elwesii*, should be extensively used; its flowers are large and valuable for cutting. The *Chionodoxas* are charming companions to Elwes' Giant Snowdrop; indeed, both are found growing wild together, and as Nature is never found out of harmony, the information may be suggestive to those who desire to follow her guidance in intermingling these early spring beauties.

(Barr and Son, 12 and 13 King Street, Covent Garden, 1895.)

CHIONODOXA (Glory of the Snow).

The Chionodoxa is so widely known and appreciated, it is almost unnecessary to say anything in its praise. Mr. William Robinson recommends it for naturalizing, and, we may add, that the Chionodoxas will thus afford a lasting pleasure. The species offered are real gems amongst spring flowers.

Chionodoxa Luciliae (*The Glory of the Snow*), the most beautiful of all dwarf blue spring-flowers, and unsurpassed for edgings and masses in flower borders and on rockwork; colour deep Nemophila-blue, with clear snow-white centre. Mr. George Maw, in describing the circumstances under which he found the Chionodoxa Luciliae, says, "At the lower level it was out of flower, but near the summit of the mountain a mass was met with in full splendour, forming one of the most sumptuous displays of floral beauty I ever beheld; a mass of blue and white, resembling Nemophila insignis in colour, but more intense and brilliant." Had Mr. Maw seen *C. sardensis* and *C. gigantea*, we feel sure he would have been filled with perhaps even greater enthusiasm. The Chionodoxa Luciliae was figured in *The Garden*, July 3rd, 1880, and in 1878 the Floral Committee of the R. H. S. awarded to our specimens a First-Class Certificate.

818	" " " extra selected	" 40s.; " 4s. 6d.; " 8d.
	Chionodoxa sardensis, introduced by us in 1883. A First-Class Certificate was awarded to our plants, 1885, by the R. H. S., also by the Royal Botanic Society. <i>The Garden</i> of 14th March, 1885, refers to it thus:—	
	" <i>Chionodoxa sardensis</i> is a gem among spring bulbs—one of the rare really blue flowers. A good sized patch is strikingly brilliant, the petals are coloured nearly to the centre." The deep gentian blue of this flower renders it so striking that for distant effect it cannot be too highly recommended.

WINTER ACONITE.

Early in Spring the golden blossoms of the Winter Aconite are beautiful, resting on emerald-green cushions of leaves, and very effective, especially when associated with Snowdrops, Early Scillas, Chionodoxas, Anemone fulgens, Anemone apennina, etc. Under trees and in moist situations, where few other plants will thrive, the Winter Aconite luxuriates and densely clothes the ground with its bright green foliage long after the flowers have disappeared. It is a good useful plant to naturalize in grass, etc.

SNOWFLAKES (Leucojum), Spring, Summer, and Autumn-Flowering.

Leucojum vernum the Spring Snowflake, is one of our earliest and most beautiful Spring flowers, the blossoms of which, resembling a large Snowdrop, are handsome in outline and elegant in bouquets. *L. estivum* and *hernandezii*, the Summer Snowflakes, flower in April and May, and are remarkable for their elegant blossoms. *L. autumnale* is a charming white, pink-tipped Fairy-like Snowdrop, blooming in August and September. *L. trichophyllum*, var. *grandiflorum*, resembles *Autumnale* in its graceful flowers, which are pure white and produced in spring; a very rare plant, figured in *Bot. Register*, vol. vii, page 544; in its native habitat it is found growing in pure sand. Mr. William Robinson, in his paper at the Conference on Hardy Flowers, remarked:—"The early-flowering Leucojum is a more precious flower for gathering than the Snowdrop, and the late-flowering Leucojum is graceful and handsome in grass."

SCILLAS, Early-Flowering.

The effect in early Spring can hardly be over-estimated of the intense rich hyacinth-blue of *Scilla sibirica*, and the beautiful ultramarine-blue of *Scilla bifolia*, contrasting with the snow-white of the Snowdrop and the varied hues of the Crocus. As permanent edgings these two early-flowering Scillas are most valuable. Grown in pots or jardinières, alone, or with other bulbs, they form a pleasing variety amongst indoor plants. In flower beds and masses, the blossoms are so abundantly produced as to carpet the ground. *Bifolia* is the first in bloom and is closely followed by *Sibirica*. All suitable for naturalization and permanent flower borders.

SCILLAS, May-Flowering (Wood Hyacinths).

The Wood Hyacinth is one of the most decorative of May-flowering bulbs. Our native species, *Scilla nutans*, abounds in most parts of the country, and many suppose it to be the "Culver keys" referred to by Izaak Walton. The fine Spanish varieties (*S. campanulata*) have erect flower spikes and larger and handsomer flowers than our native plants, which have small drooping flowers. All the Wood Hyacinths are very effective in flower and shrubbery borders, and most valuable for wild gardens and woodlands. They also make charming pot-plants, and may be forced into bloom by March. The white varieties are greatly in demand to cut for table bouquets and vases. Mr. William Robinson, in his paper at the Conference on Hardy Flowers, refers to the Spanish Scillas (*S. campanulata* vars.) as "giving new aspects of flower life." In addition to these we recommend Nos. 859 and 880.

PUSCHKINIA.

The beautiful variety of Puschkinia we offer is a first-class dwarf hardy April-flowering bulb, and should be represented in the permanent flower borders of every garden; it is charming on rockwork, and is also a lovely in-door pot-plant (6 bulbs in a pot). A coloured plate of it appeared in *The Garden*, 1878 and 1881.

LILY OF THE VALLEY.

For Forcing, and making Plantations out-of-doors.

The clumps of Lily of the Valley quoted, have been specially prepared, and cannot fail to give abundance of flowers. In potting, the crowns should be covered and the soil one inch below the rim of the pot; *tight potting* is of great importance, and care should be taken, in the first watering, that the moisture penetrates to the centre of the clump. The Berlin Crowns are now the most extensively used for forcing by the growers for Covent Garden Market, who put 20 to 30 in a 5-inch pot. The prepared clumps, however, we think will be the most useful for private growers. The supply of Extra Selected Clumps being always limited, orders should be booked early, for dispatch in November. For Lily of the Valley beds, clumps in north borders, or to naturalize, the Dutch Crowns are the best.

CULTURE.—A moist atmosphere and abundance of water is indispensable to success in forcing Lily of the Valley; therefore, to encourage simultaneously the development of flower and foliage, most growers place the pots in a shady damp part of the house, or invert a flower-pot over the crowns, till the flower and the foliage have made some progress, then they are removed to a less shady situation. If they are grown in a dry atmosphere, or get an insufficient supply of water at the roots, the crowns, technically speaking, "go blind."

DIELYTRA (LYRE FLOWER).

For Forcing or Planting out.

The most graceful of forced plants for conservatory and room decoration, also to cut for furnishing vases. The elegant pendant branches are loaded with beautiful rosy crimson heart-shaped flowers, and furnished with the most delicate rich green foliage. In shrubberies or herbaceous borders, where it succeeds, no plant in summer attracts so much attention as the Lyre Flower.

SPIRÆA (THE MEADOW SWEET).

For Forcing or Planting out.

The large graceful, feathery, pure white, fragrant flowers of *Spiræa japonica* and the new variety *compacta multiflora* are unique flowers to cut for furnishing vases, while the plants are amongst the most decorative for the conservatory and room. In forcing, a moist atmosphere and abundance of water at the roots is necessary. *Spiræa palmata* has feathery clusters of lovely rosy crimson blossoms, which when cut are greatly prized for vases and bouquets. *Spiræa japonica* fol. aureo-reticulatis is attractive and ornamental, and forces as easily as *S. japonica*. In sheltered moist borders out of doors, the *Spiræas* enumerated are all very decorative plants.

For other beautiful Species of Spiræas, see PLANT CATALOGUE.

IRISES.

Irises are the "Orchids" of the flower garden. Their blossoms are the most rich and varied in colour of hardy plants; their time of flowering ranges from Christmas to August. They should be extensively planted in flower and shrubby borders, and naturalized. As cut-flowers Irises are most valuable, competing in richness and variety of colour with the choicest and the most beautiful Orchids. For Beautiful Bearded and Beardless Flag Irises, dwarf and tall growing, also Japanese Flag Irises, see our Hardy Plant Catalogue.

BARR'S ENGLISH IRIS, June-flowering.

(THE LARGE FLOWERING BULBOUS IRIS OF THE PYRENEES.)

These magnificent Irises thrive best in a well-drained light or medium soil; when the soil is very heavy surround the bulbs with sand and see well to drainage. When convenient plant as soon after the beginning of September as possible. We have planted as late as December, but the earlier the planting is done, the greater the success. The varieties offered have been specially selected from several of the largest and best collections, as being the finest and most distinct, and will be found as strikingly beautiful and varied in colour as the most sumptuous orchids of the hot-house. They flower in June, thus succeeding the Bearded Flag Irises.

Our Annual Exhibits of cut flowers of these grand Irises, at the London Summer Shows, attract much attention and elicit great admiration. During their flowering season, a constant exhibition of bulbous Iris flowers is maintained at King Street, Covent Garden.

BARR'S SPANISH IRIS, June-flowering.

(THE ORCHID-LIKE BULBOUS IRIS OF SPAIN).

The Spanish Irises flower a fortnight before the English, and differ also considerably, the flowers being smaller, and the colours quite different in the curious and charming blendings of shades in the same flower, which give them the appearance of many of our rare orchids, which they compete with in grace and beauty. The cut flowers are greatly prized for vases and bouquets. Cultural treatment same as for the English Iris. As pot plants they are now much used, and may be gently forced. See Coloured Plate in *The Garden*, 1881.

☞ Our Annual Exhibits of cut blooms of these beautiful Irises form a great feature of attraction.

(Barr and Son, 12 and 13 King Street, Covent Garden, 1895.)

VARIOUS BEAUTIFUL

BULBOUS AND TUBEROUS-ROOTED IRIS SPECIES.

These Iris Species are all hardy and beautiful, flowering one after the other from November to June. The dwarf early species would be more enjoyed if planted on rockwork, where the flowers could be a little protected from heavy rains. *Alata*, *Reticulata*, *Histro* and *Histroides*, *Vartani*, and *Stylosa vars.*, are charming winter-flowering species, followed in February by other varieties of *I. Reticulata*, which have lovely violet-scented blossoms, the sweet-scented *I. Persica*, the beautiful new species *I. Rosenbachiana*, *Kolpakowskiana*, *Bakeriana*, and *Danfordia*. Next in succession come the interesting *Caucasica*, *Orchioides*, the curious Snakeshead Iris *Tuberosa*, and the new species *I. Sindjarensis*. These are followed closely by *Susiana*, *Iberica*, etc., with their large handsome beautifully netted flowers; along with these, *I. Atrofusca*, *Atropurpurea*, *Bismarckiana*, *Gatesii*, *Lorteti*, *Lupina*, and *Helena*, surpass in beauty and interest any written description that can be given of them. The charming dwarf Irises *flavissima* and *Bloudovii*, the pretty Peacock Iris, and the beautiful *Iris cristata* flower in May, and are followed in June by *Iris Juncea*, *Boissieri*, *Lusitanica*, and *Tingitana*.

The Irises marked * belong to the *Oncocyclus* and *Regelia* Sections, and require special treatment. The roots should be planted in November (the tops not more than two inches below the surface) in a light rich well-drained soil, and covered with three or four inches of wheat straw or, better still, marsh reeds, which should be removed in March. Immediately these Irises have done flowering place over the plants a light, or panes of glass elevated eighteen inches above the ground, so as to admit at the sides a free entry of air, and at the same time to keep off rain till October. The object desired is to thoroughly ripen the roots, and prevent them starting into growth before Spring. The covering in winter is to keep off heavy rains, and discourage a premature growth. If this treatment secures the object required, the roots may remain undisturbed for several years, but if it fails, then try Mr. Ewbank's plan of using flag stones to intercept the rise of moisture which stimulates an autumn growth, or lift the roots immediately they have done flowering, and keep them on a dry shelf or in perfectly dry sand till time of planting. *The great beauty of these Irises, especially when seen in established masses, will fully repay the special treatment they require.*

For an interesting history and description of the various *Oncocyclus* and *Regelia* Irises, see Prof. Foster's article in *The Garden*, February 18th, 1893. For the Rev. Henry Ewbank's successful culture of these Irises on raised beds, see *The Garden*, May 13th, 1893, &c. (*A Beautiful Coloured Plate of Oncocyclus Irises, Gatesii, Lorteti, and Lupina*, can be had for 6d. *Another Coloured Plate of Irises, Atrofusca, Bismarckiana, Atropurpurea, and Helena* (Marie) for 6d.)

As for Beautiful Flag Irises, Tall Bearded, Dwarf, and Japanese, etc., see Daffodil or Plant Catalogue.		

IXIAS, MORPHIXIAS, SPARAXIS, TRITONIAS, AND BABIANAS.

CULTURE IN-DOORS.—From September to January plant five or six bulbs in a four or five-inch pot, using a compost of turf loam, leaf soil, and silver sand. Make the soil firm about the bulbs, then plunge the pots in ashes in a cold pit or frame, and withhold water till the plants appear, and at first give sparingly. When the plants are in growth, the lights should be left off, except during wet or frosty weather. Early in February, or when the plants have made sufficient growth, remove them to the greenhouse, keep close to the glass, and carefully attend to the watering.

CULTURE OUT-DOORS.—Plant from October to January, at a depth of three inches, and the bulbs two inches apart, in a prepared light loamy soil, thoroughly drained, the bed raised six inches above the general level, with a due south aspect. Should the earlier plantings make foliage in autumn, slight protection must be given, especially during severe frost. The later plantings will flower after the earlier ones, therefore select a situation for them where the sun's rays will be somewhat broken, and thus the blooming period will be prolonged. The gorgeous beauty of these flowers amply rewards the little extra care they require to ensure success.

IXIAS.

The Ixia is a slender graceful growing plant, with long loose spikes of bloom. The colours are rich, varied, and beautiful, the centre always differing in colour from the other parts of the flower, so that the blossoms expanding in the sun's rays present a picture of gorgeous beauty.

THE RANUNCULUS.

CULTURE.—Plant the Turban and Turco-Persian Ranunculus from October to March, and the Persian varieties from January to April. When the soil works kindly, and the day is dry, draw drills two inches deep, and five or six inches apart; at the bottom of the drill sprinkle a little sand, press the tubers firmly into the soil, *claws downwards*, and cover them with sand, then with soil, keeping the crown of the tuber two inches under the surface. During severe weather, cover the early plantings with *wheat straw or marsh reeds*, this remove before the foliage in Spring gets injured. In April and May, during dry weather, water the beds freely, two or three times a week if necessary; and when the flower-buds appear, water daily if required, and continue doing so while the plants are blooming; this will insure fine flowers. *In watering, wet the foliage as little as possible.* If grown as pot-plants put three tubers in a four-inch pot and plunge out of doors for a time.

DOUBLE PERSIAN RANUNCULUS for Beds, Borders, and Masses.

The named varieties offered below in Collections have been selected on account of their large flowers.

TURCO-PERSIAN BEDDING RANUNCULUS, New Large-flowering.

This new race of Ranunculus is remarkable for a vigorous growth, and is profusely floriferous. Where cut flowers are in demand, these new Ranunculus are most valuable, as flowers may be gathered from the same bed several times a week, during the flowering period, without impairing the display.

THE ANEMONE, OR WINDFLOWER (See also Novelties, page 3).

For brilliancy of colour few flowers can compare with the Anemone, which in Spring produces its masses of double or single blossoms in an endless variety of shades, scarlets, crimson, roses, blushes, lilacs, blues, purples, and white, all of which for cutting are valuable, lasting long in water. For beds, edgings, and masses, in the borders it is matchless, and may be had in bloom, weather permitting, from November to July, according to situation, locality, and time of planting.

CULTURE.—Any good soil, moderately well drained, suits the Anemone. Plant in succession *A. coronaria* varieties from October to May, the roots four to six inches apart, at a depth of two to three inches, choosing a dry day, and when the ground is in good working condition. The plantings for Summer and Autumn-flowering should be in a situation where the ground is moist, and in shade from the sun's rays after 10 or 11 a.m. If grown as pot-plants, put three tubers in a four inch pot, and plunge out of doors for a time.

NEW DOUBLE POPPY ANEMONES FOR BEDS AND MASSES (*A. coronaria* varieties).

The flowers of the Double Poppy Anemone resemble a semi-double Hollyhock, and are extremely handsome. When planted from October to December, they flower in succession during the early Spring months, and those planted from January to April flower in succession from April to July. Each amateur should plant Autumn and Spring, and find out which is best for his soil and climate.

1112 " " "Victoria Giant (also called Empress or Caen Anemones), a magnificent race of Single Poppy Anemones with immense saucer-shaped flowers, in brilliant colours, per 100, 5/-; per dozen, 10d.			
1113 ANEMONE, "ST. BRIGID," a very lovely strain of Anemones. The flowers are very large, mostly semi-double, and of the most brilliant and varied shades of colour. All the flowers have a handsome blue-black central boss. Plants graceful in habit, and remarkably free-flowering; per 100, 10/-; per dozen, 1/-.			

ANEMONE STELLATA (the Starry Windflower of the Riviera).

These Starry-flowered Single Anemones are remarkable for variety of brilliant colours, elegant flowers, and graceful foliage. A light well-drained soil in a warm sheltered situation suits them best; on rockwork they look charming; they also make good pot-plants, six roots in a pot. Plant Sept., Oct., and Nov.

ANEMONE FULGENS (the Beautiful Scarlet Windflower of the Pyrenees, etc.).

Anemone fulgens is the most brilliant and graceful of all Winter and Spring-flowering Anemones. The rich dazzling scarlet flowers, and light elegant growth, render it the most attractive scarlet flower of Spring. It is invaluable for table bouquets or vases, as it lasts a long time in water. If the roots are planted early in Autumn, flowers, weather permitting, may be gathered from Christmas; its hardiness is beyond all question, so that roots may be safely planted any month from August to May. The plantings made April and May should be in a situation where in summer the ground is moist, and the sun's rays do not fall on them after 10 or 11 a.m. If grown as pot plants plunge out of doors for a time (Figured in The Garden, 1877.)

ANEMONES—continued.

VARIOUS BEAUTIFUL ANEMONES.

Anemone apennina, the blue Mountain Windflower, forms a dense cushion of rich blue, and is one of the loveliest of dwarf Spring flowers. Mr. William Robinson in his paper at the Conference on Hardy Flowers described its fine effect when planted in meadows or near to large elm trees (the flowers and foliage passing away before haymaking time). *A. blanda* resembles *A. apennina* in flower, but blooms a month earlier. The varieties of *Anemone nemorosa* literally carpet the ground with their charming flowers. *A. nemorosa Robinsoniana* is remarkably beautiful, and *A. nemorosa bracteata* may be called "the Jack in the Green" of Anenomes, the white petals rest on green bracts. *A. pulsatilla* flowers spring and autumn. All the above-named species are charming on rockwork and are beautiful as pot-plants. *A. rivularis* is a very ornamental spring flower. *A. japonica*, white, rose, and red, are the most decorative of Autumn-flowering herbaceous plants.

CYCLAMEN.

GREENHOUSE CYCLAMEN (*C. persicum*). Plants ready from Sept.

Cyclamen persicum is an indispensable plant for indoor decoration, and few flowers are more highly prized for button-hole bouquets, ladies' dresses, and finger-glasses. It may be cultivated in a cool greenhouse, or cold frame, with a little winter protection.

1144 *Cyclamen persicum grandiflorum*, fine large-flowered varieties for Greenhouse decoration, per dozen (according to size of plants), 15s., 21s., 25s., and 30s.; each, 1s. 6d., 2s., 2s. 6d., 3s. 6d., and 5s. 6d. Seed 1s. and 1s. 6d. per packet.

HARDY CYCLAMEN SPECIES, for Rockwork out-of-doors.

These Hardy Cyclamen require perfect drainage, and shelter from the cutting winds of March and April, and the hot rays of the Summer sun; at the bottom of old walls facing north and on rockwork they are very beautiful; or nestling in the grass, near the roots and under the shelter of old trees, the effect is most charming. *C. Europaeum* is fragrant, and commences flowering in July. *Ibericum* and *Coum* varieties bloom from December to March; *Repandum* closes the Cyclamen season in April. *Repandum* and *Africanum* should be planted in warm protected situations on rockwork, and covered with leaves or bracken till March.

Cyclamen neopolitanum and *græcum* are perfectly hardy, and have large and beautifully variegated leaves, which are decorative throughout Autumn and Spring, and make beautiful Winter beds, intermingled with *Scillas*, *Chionodoxas*, *Leucojums*, *Narcissus nanus*, *Snowdrops*, *Muscaris*, &c.

~~These hardy Cyclamen are kept in pots ready for dispatch at all seasons.~~

HYACINTHUS CANDICANS (*Galtonia candicans*)

THE GREAT SNOW-WHITE SUMMER-FLOWERING HYACINTH.

1184 *Hyacinthus Candicans* attains a height of 3 to 6 feet, according to soil and situation, and is surrounded with 20 to 50 graceful pendant pure white bell-shaped flowers, equally decorative for the flower border or the conservatory. Figured in *The Garden*, 1881.

Large Flowering bulbs, p. 100, 6/6; p. doz. 1/3. Larger selected bulbs, p. 100, 8/6; p. doz. 1/6
(Barr and Son, 12 and 13, King Street, Covent Garden, 1895.)

BARR'S BEAUTIFUL GLADIOLI.

EARLY-FLOWERING HARDY GLADIOLI, for Autumn and Winter-Planting.

Bulbs ready from October.

These beautiful Early-flowering Gladioli are greatly prized as cut flowers from May to July for filling vases, &c., and on this account, as also for the fine effect they produce in the flower garden, they should be largely planted. G. Colvillei, "The Bride," is exceptionally valuable, and is extensively grown in pots to cut during April, May, and June for Covent Garden Market. All the Gladioli we have enumerated as early-flowering may be grown in pots for indoor decoration.

CULTURE OUT-DOORS.—A sunny situation is preferred. Trench the ground, working in plenty of rotten manure in the underspit; plant the varieties marked with an * from October to December, and the others from November till February, at a depth of six inches. If the summer is dry and the weather hot, a good soaking of water or liquid manure twice a week greatly benefits the growing plants. When planted in autumn, the beds should be lightly covered with fern, wheat-straw, or marsh reeds, which should be removed in March.

CULTURE FOR CONSERVATORY DECORATION.—Plant three to five bulbs, according to size, in a five or six-inch pot, and plunge in ashes in a cold frame or pit, withholding water till the bulbs have started into growth; or, the pots may be buried in ashes out of doors, as recommended for the Hyacinth, and there allowed to remain undisturbed till ready to remove indoors.

BEAUTIFUL NEW HYBRID BUTTERFLY GLADIOLI (Lemoine's).

Hybrids of *G. purpureo-auratus* and the best of the *G. gandavensis* varieties.

This new and handsome race of Gladioli is distinct in form and markings from the varieties of *Gandavensis*; the colours are beautiful, and the large blotches on the lower petals strikingly attractive. They are hardy vigorous growers, and bloom during the interval between the early and late flowering Gladioli. Descriptive list of these beautiful Gladioli will be sent on application.

1214 " " Splendid Unnamed Varieties, mixed, for planting in flower beds and borders	per 100, 42s.; per doz. 6s.

RARE AND BEAUTIFUL SPECIES OF CAPE GLADIOLI.

Of the species contained in the undermentioned collection, *Alatus*, *Galeatus*, *Gracilis*, *Hirsutus*, *Præcox*, and *Ringens* are hardy in the southern parts of England, the west coast of Scotland, and in Ireland; in less favoured parts they should be planted under a south wall, or protected in winter with a frame or handlight, or be grown in pots under glass. The other species contained in the collection, namely, *Concolor*, *Dracocæphalus*, *Grandis*, *Milleri*, *Purpureo-auratus*, *Roseus*, *Sulphureus*, *Tenellus*, *Tristis*, *Vinulus*, *Watsonianus*, and *Xanthospilos*, are hardy, and should be planted in autumn—*Psittacinus* and *Saundersi* plant in spring. The above Gladioli flower April to June, except *Dracocæphalus*, *Purpureo-auratus*, and *Saundersi*, which bloom July to August.

1215 Collection of One each of 20 curious and beautiful species of <i>Gladioli</i> ,	12s.
1216 <i>Gladiolus Saundersi</i> , bright salmon-scarlet, lower petals white, spotted scarlet, showy, 2ft., p.doz. 6/6; each 8d.

AMARYLLIS.

Under this heading are arranged plants, differing very much in character, and requiring separate treatment.

THE GUERNSEY AND BELLADONNA LILIES.

The Guernsey and Belladonna Lilies are generally received by us early in September, when the flower-buds have appeared above ground. The supply being always uncertain, orders for them should be given as soon as possible after the 1st, and not later than the 15th September. When executing orders for Guernsey and Belladonna Lilies, we carefully examine the flower buds, and send only such bulbs as give promise of good flowers. Delay in transit, neglect on the part of purchasers to plant immediately, or, perhaps an undeveloped defect in the flower bud sometimes lead to partial failures, and as we cannot hold ourselves responsible for such contingencies, purchasers are in consequence recommended to buy an extra quantity of bulbs, as they are inexpensive.

CULTURE.—Immediately the Guernsey and Belladonna Lilies are received, pot them in light soil, prepared cocoa-fibre or moss, and give water liberally. Bulbs of Guernsey Lilies, purchased after the flowering season, should be potted and grown under glass. Bulbs of Belladonna Lilies may be planted under a south wall at a depth of one foot, and when established will flower annually.

1218 Guernsey Lily (<i>Nerine sarniensis</i>), flowers brilliant scarlet, having the appearance, when seen with the sun's rays on them, of being spangled with gold	each—s. d.
1219 Belladonna Lily (<i>Amaryllis belladonna</i>), produces umbels of large white flowers, shaded and tipped deep rose	per doz. 7/6 o 9

HARDY AMARYLLIS.

Amaryllis Candida (*Zephyranthes*), "The Flower of the West Wind," throws up in autumn a profusion of white Crocus-like flowers. *Lutea* (*Sternbergia*), "The Lily of the Field," is also a good bulb, for edgings and groups, the golden-yellow Crocus-like flowers rise in Autumn from the midst of a bright green foliage.

1220 <i>Candida</i> (<i>Zephyranthes</i>), white, valuable as an edging, and beautiful in groups	per 100, 7/6 i 3
1221 <i>Lutea</i> (<i>Sternbergia</i>), bright golden-yellow crocus-like flowers, produced in Autumn,	per 100, 12/6 i 9

VALLOTA PURPUREA, AND THE JACOBÉA LILIES.

Vallota purpurea, known also as "The Scarborough Lily," is most valuable as an Autumn-flowering plant, and as a cut flower for filling vases. We recommend it to be planted out of doors in May, and when in bud potted up for conservatory decoration. *Amaryllis formosissima*, the Jacobea Lily and its variety *Glaucia*, are quaintly-shaped beautiful flowers; the bulbs force easily, and may be potted in succession for Spring decoration. In April the dry bulbs can be planted out in flower beds or borders for Summer-flowering.

1222 <i>Vallota purpurea</i> (The Scarborough Lily), large handsome bright scarlet flowers in umbels.	each s. d.
Established in pots, 15s., 21s. & 30s. per doz.; 1s. 6d., 2s. 6d. & 3s. 6d.	o 6

1223 <i>Amaryllis formosissima</i> (The Jacobea Lily), rich dark crimson	per doz. 5s. 6d. o 6
1224 " " glauca, bright crimson-scarlet, very striking	per doz. 4s. 6d. o 6

(Barr and Son, 12 and 13 King Street, Covent Garden, 1895.)

CHOICE GREENHOUSE AMARYLLIS (HIPPEASTRUM).

These are grand plants in the conservatory, and to cut for table bouquets and vases. With management, these magnificent Amaryllis may be had in bloom for many months. The unnamed seedlings quoted we specially recommend; they are from the best collection in Europe, and are sure to please, both as regards variety and beauty of colour and size of flowers. The bulbs we offer are of large flowering size, and will bloom in Spring.

CULTURE.—Immediately after potting, place in a moist warm temperature if at command, and, if convenient, plunge the pot to the rim in a gentle, steady, moist bottom heat; thus treated, a vigorous leaf growth is produced, and a strong stem with a fine umbel of large flowers secured. In the absence of bottom heat these *Amaryllis* do well in any ordinary greenhouse or sunny sitting-room window. Dr. Bonavia recommends that the offsets should not be removed, but kept with the parent plant, till from six to a dozen spikes of bloom be had from the same pot; he also recommends that on the South Coast of England and in many parts of Ireland and the West Coast of Scotland, these beautiful *Amaryllises* should be grown outside, under south walls, planted one foot beneath the surface, and protected with litter or leaves during winter.

1125 CHOICE UNNAMED SEEDLING AMARYLLIS. Flowering Bulbs, purchasers are sure to be satisfied with the flowers, and have a good chance of getting new varieties of exceptional beauty.

THE LILIU.

THE LILY is matchless amongst hardy plants for variety of colour, chasteness, and beauty of form. It is an important plant to associate in beds with Rhododendrons and Paeonies, and in borders amongst Herbacaceous plants. As a pot-plant the Lily is a general favourite. A full descriptive list of 70 kinds of Beautiful Lilies will be found in our *Daffodil Catalogue*.

 For Collections of Beautiful Lilies, see *Daffodil Catalogue*.

each s_i , d_s

LILUM AURATUM (The White Golden-rayed Crimson-spotted Hill Lily of Japan), this is, indeed, the Queen of Lilies, and should have a place in every garden and conservatory. It is of simple culture and perfectly hardy, and being extremely cheap, this magnificent Lily should be largely planted in beds and borders, especially amongst Rhododendrons, Peonies, Evergreens, and in large clumps amongst herbaceous plants.

TUBEROSES.

CULTURAL TREATMENT FOR FORCED FLOWERS.—The bulbs for early flowering pot as soon as they can be procured, and plunge the pots in a temperature of about 60 degrees. The bulbs for succession keep dry or pot at once, to make root growth; in either case the temperature should not be below 50 degrees or the bulbs will suffer.

each

1246 Double American Dwarf, "Excelsior Pearl"; the best variety, being comparatively dwarf, with pure white double flowers; strong forcing roots, ready from Jan., p. 100, 15/-; per doz. 2/-	s. d.	o 3

In spring there is no prettier sight than a mass or edging of Dog's-Tooth Violets, with their prettily variegated foliage and graceful Cy'amen-like flowers, ranging in colour from deep purple to the purest white. The large handsome American varieties indicated by † are strongly recommended; they prefer a partially shaded and moist situation. Mr. William Robinson, referring to the Dog's-Tooth Violets (E. dens-canis), in his paper at the Conference on Hardy Flowers, says, "This beautiful and delicate-looking plant surprises me at the free way it grows in grass where I have planted it." Mr. R. has unconsciously imitated nature. In the high Pyrenees it abounds in the grass.

1442	" <i>macranthum</i> , very large handsome bright deep blue flowers, quite hardy, 1½ ft.	per doz. 5s. 6d. 3 6

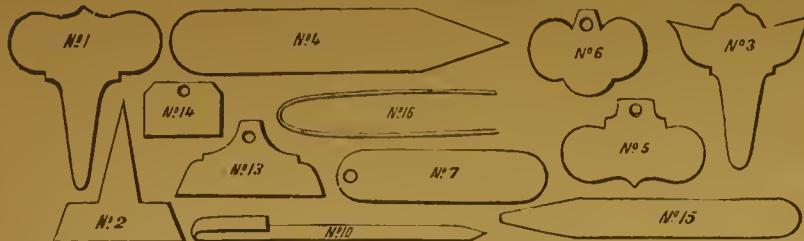

(Barr and Son, 12 and 13 King Street, Covent Garden, 1895.)

ALPHABETICAL LIST OF BULBS AND TUBERS.

		each — s. d.
1443	<i>Lachenalia aurea</i> (1st Clas. Cert. R.H.S.), bold spikes of rich yellow flowers, $\frac{3}{4}$ ft. 0 9
1444	“ <i>gigantea</i> (new). See Novelties, page 3 3 6
1445	<i>cœruleascens</i> handsome tall spikes of pale blue flowers, handsome foliage, per doz. 10s. 6d.	1 0
1446	<i>fragrans</i> , white, sweet smelling flowers, 1 ft.	0 9
1447	<i>glaucina</i> , spikes of pretty metallic-blue flowers, handsome foliage, very striking, $\frac{1}{2}$ ft. Figured Bot. Mag., Vol. 64, Tab. 3555	per doz. 7s. 6d. 0 9
1448	<i>luteola</i> , flowers yellow, with green, robust growth, 1 ft. 5s. 6d. 0 6
1449	<i>Nelsoni</i> (1st Class Cert. R.H.S.), large deep rich golden yellow flowers, most beautiful and very free flowering, 1 ft. per doz. 10/6 1 0
1450	<i>pendula</i> , large brilliant red flowers, tipped green and purple; a very handsome showy flower, $\frac{3}{4}$ ft. per doz. 6s. 6d. 0 8
1451	“ <i>quadricolor</i> , scarlet, yellow and green, with broad crimson tip, very beautiful 1 ft. per doz. 7s. 6d. 0 9
1452	“ <i>tricolor</i> , scarlet, yellow and green, very fine, 1 ft. 4s. 6d. 0 6
	The <i>Lachenalias</i> are very beautiful greenhouse plants in early Spring, with beautiful and curiously spotted leaves and handsome flower spikes. They should be potted early in Autumn in a compost of loam, sweet leaf soil, and sand, placed in a greenhouse or frame, and never allowed to suffer for want of water. See Plate in <i>The Garden</i> , 1880.	
1453	* <i>Littonia modesta</i> , an elegant greenhouse climber, yielding abundance of slender deep golden-coloured bell-shaped flowers. In warm situations it may be planted out-doors in April	1 6
1454	<i>Lycoris aurea</i> , a greenhouse bulb of great beauty, with golden pendant flowers in October, 1 ft.	2 6
1455	* <i>Malvastrum Gilliesii</i> (<i>Modiola</i>), figured in <i>The Garden</i> , 28th Jan., 1882. This charming hardy ro k plant is profusely covered with crimson-purple flowers all the summer	per doz. 7s. 6d. 0 9
	<i>Methonias superba</i> . See <i>Gloriosa</i> .	
1456	* <i>Milla biflora</i> , pure white, large flowers of great substance, should be grown in pots under glass, or kept dry, and planted out in March in a well-drained and sunny situation, per doz. 5s. 6d.	0 6
1457	“ <i>laxa</i> , very handsome, large rich Tyrian purple flowers, 1 ft. “ 3s. 6d. 0 4
1458	“ <i>uniflora</i> , white shaded porcelain, $\frac{3}{4}$ ft. per 100, 18s. 6d.; per 100, 2s. 6d.; per doz. 6d. ...
1459	“ <i>lilacina</i> , porcelain, striped violet, $\frac{3}{4}$ ft. “ 2s. 6d.; “ 6d. ...
	The <i>Milla</i> (<i>Triteleia</i>) is a family of varied character; <i>Uniflora</i> , which produces masses of beautiful dwarf flowers in Spring, is very effective on rockwork, etc., also as an edging, and in small beds or naturalized in grass; <i>M. laxa</i> produces in Summer large umbels of lovely coloured flowers; all are perfectly hardy.	
	<i>Modiola geranioides</i> . See <i>Malvastrum Gilliesii</i> .	
1460	* <i>Montbretia Pottsii</i> , graceful branched spikes of small crimson-scarlet, Gladiolus-like flowers, remarkably showy, 2 ft. Figured in <i>The Garden</i>	per 100, 5s. 6d.; per doz. 10d. ...
1461	“ <i>crocosmæflora</i> , elegant branched spikes of handsome showy brilliant orange-red shaded yellow flowers, $\frac{2}{3}$ ft. per 100, 6s. 6d.; per doz. 1s. ...
1462	“ <i>aurea</i> , large golden-yellow flowers, 2 ft. “ 5s. 6d. 0 6
1463	“ <i>Bouquet Parfait</i> , “deep yellow, shaded vermilion, 2 ft., p. doz. 3s. 6d.	0 4
1464	“ <i>Etoile de Feu</i> , “large open flowers, rich vermilion-red, with yellow centre, 2 ft. per doz. 3s. 6d. 0 4
1465	“ <i>Golden Sheaf</i> , “handsome spikes of beautiful deep golden-yellow flowers; good dwarf habit per doz. 5s. 6d. 0 6
1466	“ <i>Phare</i> , “orange scarlet and golden-yellow, showy, 2 ft. 4s. 6d. 0 6
1467	“ <i>pyramidalis</i> , pretty apricot colour, compact and erect growth 5s. 6d. 0 6
	Montbretias rank amongst our most decorative bulbous plants in summer. Their graceful spikes of showy flowers are valuable for cutting and last long in water. They thrive out-doors in a sandy loam, and are supposed to require protection in winter, but at Gravetye Manor, Sussex, M. <i>Pottsii</i> has been growing, uninjured, for ten years without any protection, and was a mass of bloom in August.	
1468	* <i>Nemastylis Pringlii</i> , very beautiful star-shaped azure-blue flowers two inches across, flowers in June, 1 ft. Hardy on rockwork in warm spots, where it is dry in winter. Plant early in spring	1 0
	<i>Nerine sarniensis</i> . See Guernsey Lily, page 26.	
1469	“ <i>undulata</i> (<i>crispata</i>), rose coloured flowers, petals elegantly curled, a gem, $\frac{3}{4}$ ft. 2 6
1470	<i>Ornithogalum arabicum</i> , white, black centre, handsome fragrant flowers in June, very beautiful in pots in the greenhouse; may be planted on warm sunny south borders, $\frac{1}{2}$ ft., p. doz. 2/6	... 3
1471	“ <i>aureum</i> , rich apricot-orange, a beautiful and rare species, 1 ft.	extra large roots, 3/6 0 4
1472	“ <i>montanum</i> , a pretty dwarf species, with umbels of starry white flowers, $\frac{1}{2}$ ft., 1 3
1473	“ <i>nutans</i> , elegant spikes of silver grey flowers; outside shaded pale sea-green, beautiful; valuable for cutting, 1 ft. per 100, 5s. 6d.; per doz. 10d. ...
1474	“ <i>prosandrum</i> , graceful spikes of silvery-white and green flowers, $\frac{3}{4}$ ft. 2s. 6d. 0 3
1475	“ <i>pyramidalis</i> , large spikes of beautiful snowy white flowers, 2 ft. “ 5s. 6d. 0 6
1476	“ <i>umbellatum</i> <i>splendens</i> , a large handsome form of the old Star of Bethlehem, bearing umbels of pure white starry flowers, effective in masses and edgings, valuable to naturalize per 100, 3s. 6d.; per doz. 8d. ...
	Ornithogalums (Star of Bethlehem) are fine hardy bulbs, flowering in Spring and early Summer. <i>Arabicum</i> and <i>aureum</i> should either be grown in pots or planted in a warm situation close to a south wall, at a depth of 6 inches. <i>Nutans</i> , <i>Prosandrum</i> , <i>Pyramidalis</i> , and <i>Umbellatum</i> , are fine plants for naturalizing in woodlands, meadows, &c.	
1477	<i>Oxalis cernua</i> var. <i>bermudiana</i> , The Bermuda Buttercup Oxalis, a charming winter-flowering bulb for indoor decoration, producing a luxuriance of graceful bright yellow flowers for weeks. After potting keep in a dark cool position for a few weeks to root well, and then remove to a sunny window, or greenhouse	per 100, 21/-; per doz. 3s. 0 4
	<i>Pancratium calathinum</i> . A synonym of <i>Hymenocallis</i> , which see, page 31.	
1478	“ <i>illyricum</i> , beautiful white flowers, with long filamentous outer segments. A fine pot plant, or for planting under a south wall at a depth of a foot, 2 ft. per doz. 10/6 1 0
1479	“ <i>littorale</i> , a beautiful greenhouse bulb, with pure white flowers, 1 to 4 inches long, and resembling a Giant Trumpet Daffodil, 1 ft. 3 6
1480	“ <i>maritimum</i> (The Sea Daffodil), white flowers, delightfully fragrant, suitable for pot culture, or to plant under a south wall at a depth of a foot, 1 $\frac{1}{2}$ ft. per doz. 7/6 0 9
1481	(Barr and Son, 12 and 13 King Street, Covent Garden, 1895.)	

GARDEN REQUISITES—continued.

METALLIC GARDEN LABELS, &c.

Per 100, No. 1, 4s. No. 2, 3s. No. 3, 3s. No. 4, 3s. No. 5, 3s. 6d.
 .. No. 6, 2s. No. 7, 2s. No. 13, 1s. 9d. No. 14, 1s. 6d. No. 15, 1s. 6d.
 .. No. 10 and No. 16, Layering Pins, 1s.
 Ink to write on metallic labels per bottle, 6d. and 1s.

Acme Cast Labels, on stem, for pots, borders, and for hanging. Any name cast to order. Inclusive price, 3d. and 4d. each.

INSECTICIDES, FUNGICIDES, and WEED-DESTROYER.

"**Lethorion**" (Vapour Cone), a certain destroyer of all insect life affecting plants or trees. The safest and best fumigating medium known. For 50 to 100 cubic feet, cones, 6d. each; for 500 to 700, 9d. each; for 1000 to 1500 1s.; for 4000, 4s. Full particulars on application.

Fir Tree Oil, a good and safe insect destroyer, half-pint, 1s. 6d.; pint, 2s. 6d.; quart, 4s. 6d.

Murray "Electric" Mildew and Insect Destroyer, the most effective and the safest Insecticide, in bottles, 1s., 1s. 6d., and 2s. 6d.

The Pneumatic Diffuser, for use with Insecticides, highly recommended, in copper, 6s. 6d.; in nickel, 7s. 6d. each.

Fowler's Insecticide, in jars at 1s. 6d., 3s., 5s. 6d., and 10s.

Mealy Bug Destroyer, per bottle, 1s., 2s. 6d., 5s., and 10s.

Gishurst Compound, an effectual Insect-killer, boxes, 1s., 3s., and 10s. 6d.

Tobacco Paper, superior quality, 1s. 6d. per lb.; **Superior Tobacco Rag**, 1s. 9d. per lb.

Tobacco Powder, in canisters, 1s., 2s. 6d., and 5s. each. The "Duplex" Powder Distributor, 2s. 6d. each.

Anti-Blight and Mildew Powder (Tait & Buchanan's), this is the best fungicide yet discovered.

Experience has proved this to be the most efficacious antidote in use for the cure or prevention of mildew. It has been tried with equal success on *Potatoes, Vines, Tomatoes, Hops, Cucumbers, Peas, Roses, Fruit Trees and Bushes*, also on *Chrysanthemums, Heaths*, and other indoor plants.

Fuller particulars on application. Prices, 1 lb., 1s.; 3 lbs., 2s. 9d.; 7 lbs., 5s. 6d.; 14 lbs., 10s. 6d.; 28 lbs., 18s.; 56 lbs., 35s.

Malbec Bellows, the best and quickest powder distributor, price 7s. 6d. each.

Improved, with self-acting interior agitator, 8s. 6d. each.

Watson's Weed Destroying Lawn Sand. The best **Weed Killer** for use on **Lawns**. This Preparation has the remarkable property of destroying Daisies, Ribbed Grass, Plantains, Dandelions, and other Weeds which have bulbous or tap roots; and at the same time of improving the Grass, by enriching the colour and thickening the sward. It may be applied at all seasons, but an annual application in Spring not only destroys the Seedling Weeds, but, by invigorating the grass, prevents, to some extent, the burning up during hot dry weather. The "*Lawn Sand*" is clean, easy of application, and inodorous. Circular with full directions and with testimonials, on application. Price for Sample Canister, 2s. 6d. and 5s. 6d.; per $\frac{1}{2}$ cwt., 9s. 6d.; $\frac{1}{2}$ cwt., 18s.; 1 cwt., 34s.

MANURES and SOILS.

PURE ICHTHEMIC GUANO, a highly recommended fertilizer, for all Vegetables, Flowers, Exotics, Fruit and Rose Trees, Lawns, etc. Prices : 7lbs., 2s. 6d.; 14 lbs., 4s. 6d.; 28 lbs., 7s. 6d.; 56 lbs., 12s. 6d.; 1 cwt., 20s. Sample packets 6d. and 1s.

Standen's Gardeners' and Amateurs' Manure, in tins, 6d., 1s., 2s. 6d., and 5s. 6d.; 28 lbs. 10s. 6d.; 56 lb. 18s.; 1 cwt., 32s.

Floravita, for plants in pots, an inodorous safe and effective stimulating compound. Per bottle, 1s. and 2s. 6d.

SOILS, Loam, Peat, Leaf Soil, Silver Sand and Prepared Potting Soil, per bushel, 2s. 6d.

COCOA FIBRE, superior quality, 1s. per bush.; 4 bushels for 3s. 6d.

Barr's Prepared Charcoal and Cocoa Fibre, for growing Bulbs in Jardinets, Glasses, &c. Fill the Hyacinth glasses with the preparation, and then add water till no more can be absorbed. In the glass, place the bulb so as to rest the base on the preparation, then tie it down with brown paper as you would a jam-pot, leaving an opening in the centre of the paper for the shoot. When the bulb has well rooted the paper may be removed; care must be taken that the material in the glass is kept wet. The same remark applies to bulbs grown in vases; they must be kept in place till they have rooted, 5s. per bush.; 1s. 6d. per peck.

Jadoo Fibre, the new substitute for earth. It is cleanly to use, is very light, and for growing plants and bulbs (of all kinds) in hanging baskets, vases, glasses, jardinets, etc., it is said to be unsurpassed. Full particulars and testimonials on application. Price per peck, 1s.; per bushel, 3s. 6d.: per three bushels, 8s.

Jadoo Concentrated Liquid. Specially recommended as a stimulant for plants grown in **Jadoo Fibre**. Price : one quart, 1s.; one gallon, 2s.; two gallons, 3s. 6d.; five gallons, 7s. 6d. (tins included). Sample tin, free by post, 1s. 6d.

GISHURSTINE.

Unrivalled as a Dubbing on the Soles and Uppers of Boots and Shoes, for keeping the feet dry and warm.

Directions for Use—Warm the Boots, then rub in Gishurstine thoroughly all over upper Leathers, Welts, and Soles. This may be repeated once or twice a month, or oftener. One application makes leather soft and boots comfortable. Gishurstined boots take a good polish with blacking. Gishurstine has no unpleasant smell, and is otherwise an improvement on old-fashioned dubbing.

Gishurstine is sold in Tin Boxes, 6d. and 1s.; by post 9d. and 1s. 3d.

Gishurstine, specially prepared for hot climates, 9d. and 1s. 6d. per tin.

		each—s. d.
1482 *	<i>Phædranassa chloracea</i> , yellow, very fragrant, 1½ ft. p. doz. 5/6	
1483 *	“ <i>rubro-viridis</i> , rich crimson, tipped green, 1½ ft.	The <i>Phædranassas</i> (Queen Lilies) 0 6
1484 *	“ <i>schizantha</i> , rich vermillion, tipped yellow and green,	are handsome pot-plants, but may also be 1 0
1485 *	“ <i>ventricosa</i> , scarlet, protruding authors, 1½ ft.	grown under a south wall, planted at the 1 0
		depth of a foot, flowers April to June. 2 6
1486 *	<i>Polygonatum multiflorum majus</i> , the larger-flowered form of Solomon's Seal, a graceful hardy plant. Valuable to naturalize in woodlands, or for early-forcing in pots, 2 ft....per doz. 3s. 6d.	0 4
1487 *	<i>Richardia æthiopica</i> (The Lily of the Nile), large white trumpet-shaped flowers established plants in pots	per doz. 18s., 25s. & 30s.; 1s. 9d., 2s. 6d. &
1488 *	“ <i>nana</i> (Little Gem), new dwarf variety, with pure white flowers, a charming plant for greenhouse decoration	3 6
1489 *	“ <i>albo-maculata</i> , flowers white, foliage beautifully spotted white, an extremely effective pot-plant, and valuable for beds and borders	per doz. 7s. 6d. 0 9
1490 *	“ <i>hastata</i> , fine yellow flowers, with black centre and white-spotted leaves	per 100, 21s; per doz. 3s. 0 4
1491 *	“ <i>melanosticta</i> , fine primrose flowers, with black centre	0 6

The Richardias are all greenhouse plants. *Albo-maculata* is much prized for its beautifully spotted foliage; *Hastata* for its fine yellow flowers. These two varieties may also be planted outdoors in spring for summer decoration. See also Arum.

1492 *	<i>Rigidella immaculata</i> , a beautiful Mexican bulbous plant, flowers brilliant orange-scarlet, in June, very showy, $1\frac{1}{2}$ ft., same culture as for <i>Trigidiás</i>	i 6
1493	<i>Romulea Clusii</i> , large-flowered Portuguese species in various shades	per doz. 35. 6d.
1494	" <i>rosea</i> , var. <i>Leichtlini</i> (new), beautiful large satiny rose }	Graceful dwarf hardy plants, with grassy foliage
1495	" <i>speciosa</i> , deep satiny carmine, $\frac{1}{2}$ ft.	and satiny flowers. Charming for sunny nooks on rockwork.
1496	<i>Sanguinaria canadensis major</i> , the white flowers in spring are charming, borne above the coltsfoot-like leaves; plant in moist peaty soils in shade; perfectly hardy, $\frac{1}{2}$ ft.	per doz. 25. 6d.
1497	<i>Schizostylis coccinea</i> , rich scarlet Gladioli-like flowers in spikes. Quite hardy. It delights in a sheltered situation amongst trees and shrubs. Established masses lifted in autumn and potted, flower freely under glass for months, $1\frac{1}{2}$ ft.	per 100, 75. 6d.; per doz. 1/3
	Solomon's Seal. See <i>Polygonatum</i>
1498	<i>Sparaxis pulcherrima</i> , a remarkable plant, with a dense elegant grassy foliage, from which rise graceful wiry flower stems, 3 to 5 feet high, arching over in a broad graceful curve, from which hang beautiful bell-shaped flowers; quite hardy. Figured in <i>The Garden</i> , 1888	i 6
1499 *	<i>Tecophilæa cyanocrocœa</i> , a most beautiful Chilian spring-flowering bulb, bearing large crocus like deep carolean blue flowers with white throat, delicately scented. It makes a charming pot-plant, or can be grown in a warm dry situation on rockwork, or under a south wall, ht. $\frac{1}{2}$ ft.	2 6
	Tritelia. See <i>Milla</i> .	
1500	<i>Tropaeolum azureum</i> , true, a beautiful rare bulb. Flowers rich violet-blue, white centre, very pretty	3 6
1501	" <i>Jarrattii</i> , scarlet, orange, and black	per doz. 55. 6d.
1502	" <i>polyphyllum</i> , golden-yellow flowers in long trusses, quite hardy	" 55. 6d.
1503	" <i>spiciosum</i> , bright vermilion-scarlet flowers in clusters, quite hardy; grow in northern aspect and moist soil ... established pots, full of roots, per doz. 7/6 & 10/6; 9d., 1/-	...
1504 *	" <i>tuberosum</i> , yellow and red, very distinct, quite hardy. Plant in Spring, p. doz. 25. 6d.	o 3

The foregoing *Tropaeolums* are all beautiful climbers. *Azureum* and *Jarrati* are recommended for the greenhouse to trail over trellises, round pillars, etc. *Polyphyllum* revels in sunny situations. *Tuberosum* requires an open situation and poor soil, and should have branches to scramble over. *Speciosum* is one of the most lovely of hardy climbers, and may in the south of England be successfully grown if planted in a cool, moist situation, away from the sun's rays; it delights in a shady place, and especially near a stream where its roots can reach the water.

1505	<i>Ureolina psndula</i> (<i>syn. aurea</i>), a splendid warm-house bulb, with large golden-yellow flowers, tipped with rich green, and produced in graceful drooping terminal clusters	2	6
1506	<i>Watsonia</i> , 6 in 6 named vars. 4/6 }	The Watsonia is very ornamental and showy; {	
1507	" mixed varieties	requires same cultural treatment as the Gladiolus. { p. doz. 2s. 6d.	
1508	<i>Zephyranthes Andersoni</i> (<i>Habranthus</i>), flowers brown and gold, 3 ft.	p. doz.	
1509	" <i>atamasco</i> , large pure white flowers, nearly 3 in. long, ½ ft.	5/6 ... 0	6
1510	" <i>candida</i> , see <i>Amaryllis</i> , page 26. 1	0
1511	" <i>carinata</i> , beautiful full rose, large handsome flowers, 1 ft.	1/3 ...	
1512	" <i>Tritonia</i> , beautiful white fragrant lily-like flowers, 1 ft. 1	0

BARR'S PREPARED CHARCOAL AND COCOA FIBRE

For growing Bulbs in Jardinets, Glasses, &c. Fill the Hyacinth glasses with the preparation, and then add water till no more can be absorbed. In the glass, place the bulb so as to rest the base on the preparation, then tie it down with brown paper as you would a jam-pot, leaving an opening in the centre of the paper for the shoot. When the bulb has well rooted the paper may be removed; care must be taken that the material in the glass is kept wet. The same remark applies to bulbs grown in vases; they must be kept in place till they have rooted.
5/- per bush : 1/6 per peck.

JADOO FIBRE.

Jadoo Fibre, the new substitute for earth. It is cleanly to use, is very light, and for growing plants and bulbs (of all kinds) in hanging baskets, vases, glasses, jardinets, etc., it is said to be unsurpassed. Full particulars and testimonials on application. Price per peck bag, 1s.; per bushel bag, 3s. 6d.; per three bushel bag, 8s.
